My script uses the Google Street View API to download a Street View image of the specified location (**you can also get historical street views using this**). You can customize parameters such as heading, pitch, fov, size, and output file name based on your requirements. Ensure compliance with Google's terms of service when using the Street View API.

The address is `1600 Amphitheatre Parkway, Mountain View, CA`

The image will be:

The address is `55 Ashford Street, Alston, MA`

The image will be:
